Fair Isaac Product Support

Problem Submission Guidelines

We encourage customers to first consult the appropriate documentation for the product they are using (installation guides, reference manuals, user guides, product release notes, etc.). Release notes will typically include contents of the release, installation/license information, known limitations, product support, and compatibility information. Other reference materials should also be consulted as needed for related components such as database management systems, compilers, operating systems, etc. For Fair Isaac products with web-based self-service, visit the support web site to search for known questions, solutions and technical notes.

If you've completed this initial research and are still unable to resolve your problem, the next step is to contact Product Support. The following information is critical to resolving a problem:

- Your Customer ID (a 4-digit number communicated to you either by your Engagement Manager or during your first contact with Product Support) or license number (if applicable).
- Your phone number and email address
- The name and version of the Fair Isaac software to which the issue pertains. For incidents submitted via email, please be sure to include the product name on the subject line of the email.
- The name and version of the operating system and database.
- The environment in which the error is occurring (development, test or production).
- Both a general statement and a detailed description of the problem, including any relevant error messages.
- Frequency with which the condition occurs and at what intervals.
- Can the problem be replicated, and if so, the steps taken to recreate the problem.
- Any changes to the Fair Isaac application, including new configuration or software upgrades.
- Copies of the Fair Isaac product log files, configuration files, and screen prints of errors.

Troubleshooting Tips:

- Isolate the problem as precisely as possible using debugging facilities and error logs as appropriate, and try to find a consistent way to reproduce it.
- Whenever possible, modify a Fair Isaac provided example or test case to cause the same problem.
- If the problem is not consistently reproducible, check whether it may be related to insufficient memory, memory leaks, search paths, or files that may be missing from certain directories or the class path.
- Verify that the versions of the database, compilers, operating system, browser, drivers, etc. that are in use are certified and supported by Fair Isaac.
- Identify any other changes that may have occurred in your environment that may have an impact on the Fair Isaac solution (for example, database maintenance, service pack deployment, upgrade of a system component, operating system patches, etc.)
- Try to reproduce the problem on another platform or test system.
- If applicable, try to isolate various components of your solution to simplify the troubleshooting (for example, pull out a subset of rules or code from the bulk of your application). Support can assist you best if we get a small sample of your application to work with. If possible send us a small test case with instructions, so we can run the test case.
- Any changes that may have been made to the environment (for example, maintenance work that may have been performed or any hardware/software changes made to the server, workstation, operating system, or data feed).

Fair Isaac Product Support

Problem Submission Guidelines

We encourage customers to first consult the appropriate documentation for the product they are using (installation guides, reference manuals, user guides, product release notes, etc.). Release notes will typically include contents of the release, installation/license information, known limitations, product support, and compatibility information. Other reference materials should also be consulted as needed for related components such as database management systems, compilers, operating systems, etc. For Fair Isaac products with web-based self-service, visit the support web site to search for known questions, solutions and technical notes.

If you've completed this initial research and are still unable to resolve your problem, the next step is to contact Product Support. The following information is critical to resolving a problem:

- Your Customer ID (a 4-digit number communicated to you either by your Engagement Manager or during your first contact with Product Support) or license number (if applicable).
- Your phone number and email address
- The name and version of the Fair Isaac software to which the issue pertains. For incidents submitted via email, please be sure to include the product name on the subject line of the email.
- The name and version of the operating system and database.
- The environment in which the error is occurring (development, test or production).
- Both a general statement and a detailed description of the problem, including any relevant error messages.
- Frequency with which the condition occurs and at what intervals.
- Can the problem be replicated, and if so, the steps taken to recreate the problem.
- Any changes to the Fair Isaac application, including new configuration or software upgrades.
- Copies of the Fair Isaac product log files, configuration files, and screen prints of errors.

Troubleshooting Tips:

- Isolate the problem as precisely as possible using debugging facilities and error logs as appropriate, and try to find a consistent way to reproduce it.
- Whenever possible, modify a Fair Isaac provided example or test case to cause the same problem.
- If the problem is not consistently reproducible, check whether it may be related to insufficient memory, memory leaks, search paths, or files that may be missing from certain directories or the class path.
- Verify that the versions of the database, compilers, operating system, browser, drivers, etc. that are in use are certified and supported by Fair Isaac.
- Identify any other changes that may have occurred in your environment that may have an impact on the Fair Isaac solution (for example, database maintenance, service pack deployment, upgrade of a system component, operating system patches, etc.)
- Try to reproduce the problem on another platform or test system.
- If applicable, try to isolate various components of your solution to simplify the troubleshooting (for example, pull out a subset of rules or code from the bulk of your application). Support can assist you best if we get a small sample of your application to work with. If possible send us a small test case with instructions, so we can run the test case.
- Any changes that may have been made to the environment (for example, maintenance work that may have been performed or any hardware/software changes made to the server, workstation, operating system, or data feed).

4.3. Support and Maintenance during renewal terms will be subject to Fair Isaac's Support and Maintenance Policy in effect for the Software at the time of such renewal.

4.4. Support and Maintenance Fees applicable to renewal terms may be increased by Fair Isaac, but no increase may exceed the most recently available annual change in CPI.

4.5. Support and Maintenance Fees will be invoiced in advance on an annual basis.

Fair Isaac may terminate Support and Maintenance under this policy with at least 30 days' written notice if the Client is in breach under this policy or the Agreement and does not cure the breach before the end of the notice period. Fair Isaac will have no obligation to resume Support and Maintenance following a termination for cause.

4.7. Fair Isaac may, at its sole discretion, reinstate lapsed or terminated Support and Maintenance, in accordance with its then-current policies, upon payment by the Client of the applicable reinstatement fee.
